

ONLINE SHIPMENT INFORMATION SERVER SYSTEM AND METHOD FOR
PROVIDING SHIPMENT INFORMATION TO FREIGHT FORWARDER

ABSTRACT OF THE DISCLOSURE

An online shipment information server system and method is proposed, which allows
5 a manufacturer to provide online shipment information, including EDI855-related informa-
tion, delivery-related information, and EDI856-related information, to a freight forwarder in
real time so as to allow the freight forwarder to prepare the required customs/exportation
documents for the shipment of the manufacturer-consigned freight to a foreign country. The
proposed online shipment information server system and method allows the freight for-
10 warder to receive online shipment information in real-time via Internet, without having to be
mailed or faxed by the manufacturer to the freight forwarder, thereby allowing the freight
forwarder to execute the required custom/exportation application procedures more effi-
ciently and reliably.
